*It all started with a Dream...*

*worth a dream.*

The world is Changing. Evolving. Advancing. It is the way of human nature to look ahead, to imagine a future that surpasses our present, to dream of the unrecognizable as reality, to envision the once impossible as a mere hurdle. It is out of intuitive desire that great vision is birthed and passionate pursuit chased down. And few in a lifetime are willing to chance everything on dreams of the future. But what if that once-in-a-lifetime moment was right at your fingertips?

*Imagine*

# A Responsibility

From the past until now, fossil fuel has been the power for mobility. Currently, 80% of the global primary energy demand is based on fossil fuels, which is considered to be two-thirds of the global CO2 emissions on average.

Unfortunately, if the current production & energy consumption are going to continue at the same rates. The demand of fossil fuels will double by the year 2050, allowing emissions to significantly surpass the amount of carbon emitted we see today. This level of CO2 emissions would have disastrous climate consequences on the planet.

THE TIDES OF

*Change*

All water contains Hydrogen. Through a process known as "Electrolysis," water molecules can be split into oxygen and hydrogen gas. Running this process backward is how Hydrogen mixed with oxygen makes electricity. Scientists estimate that Hydrogen makes up over 90% of all the atoms in the universe.

CHANGE

REIMAGINING WAYS TO CREATE POWER...

## ESG

From RONN's earliest days working to provide long-term solutions to reduce pollution, we understood that fundamental environmental factors are a responsibility, not a buzzword. We believe in implementing Environmental, Social, and Corporate Governance priorities that highlight the need for change and provide a better quality of life for those we love. For us, it's not only about business goals but the world around us and making it a better place than when we found it.

# UNPLUGGED

Hydrogen is an incredible energy source for making electricity to power vehicles and so much more. It's carbon-neutral, cleaner to produce, and is the universe's most abundant element. In simple, a hydrogen fuel cell vehicle is an electric vehicle you never need to plug in to charge.

INNOVATION THROUGH IMAGINATION...

EMPOWERING

*People*

The idea behind "Empowerment of Conscience Engineering" is about giving people the power to pursue the things that matter the most to them. As parents think about a better world for their children, today's youth ponder the future and our planet's well-being. Hydrogen-Powered Zero-Emission Vehicles are a significant component of a cleaner tomorrow and are part of the solution for the road ahead.

ZERO-EMISSIONS

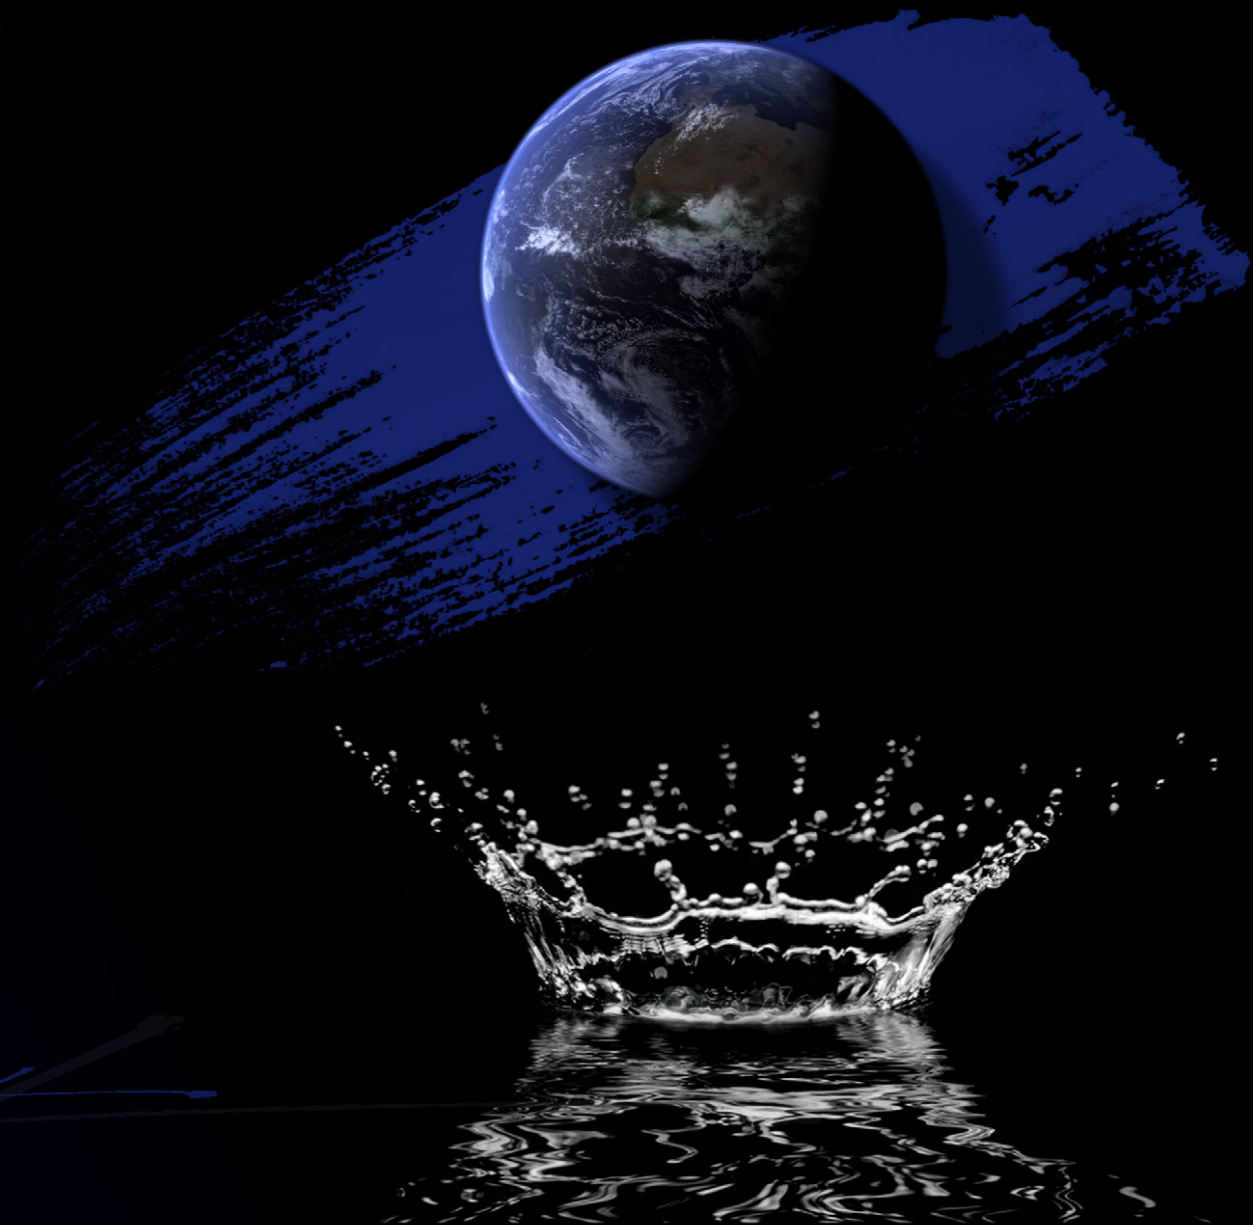

This is the future. Do you see it? It looks nothing like today, nothing like the tomorrow our minds envision. Look beyond... Allow your senses to soar to places unhindered, to a future progressing with innovative freedom to dream. A new reality powered by infinite possibilities and driven by technological advancements. You are the visionary. Buckle in the driver's seat and dare to travel the road paved with imagination to reach tomorrow's destination.

THE TIME IS NOW

*Inspire*

*Innovate*

*Impact*

A Multinational Hydrogen Fuel Cell Electric Vehicle Automaker and Sustainable Energy Company
